# NCR RIDE BOOKING ANALYSIS

Data-Driven Insights & Interactive  
Excel Dashboard

**PRESENTED BY: ROHIT KUMAR**

# PROJECT OVERVIEW

## The Big Picture

### THE GOAL

Analyze ride-booking trends in the NCR region and identify growth opportunities.

### THE DATA

145,000+ booking records covering revenue, cancellations, and vehicle types.

### THE OUTCOME

An interactive dashboard that reduces manual reporting and improves visibility.

**Turning massive raw data into actionable business intelligence.**

# THE PROBLEM STATEMENT

## Operational Challenges

## BUSINESS BOTTLENECKS

### Messy Data

Raw data had duplicates, incorrect formats, and missing values, making it unreliable for decision-making.

### Manual Effort

Reporting was slow and prone to human error, delaying critical business responses.

### Hidden Losses

High cancellation rates were causing significant revenue loss without a clear "Why" or actionable insights.

# DATA CLEANING & PREPARATION

## The Process

### REMOVING NOISE

Deleted duplicate Booking IDs and handled missing values to ensure 100% data accuracy.

### FORMATTING

Converted Date-Time columns and corrected numeric formats for revenue and distance metrics.

### FEATURE ENGINEERING

Created "Month" and "Day" columns using the TEXT() function for granular trend analysis.

### STRUCTURING

Organized raw data into an Excel Table for seamless Pivot Table and Dashboard integration.

# TECHNICAL TOOLS USED

## The Tech Stack

### MICROSOFT EXCEL

The core platform for data cleaning, processing, and interactive dashboarding.

### PIVOT TABLES & CHARTS

Used for summarizing 145k+ records and creating dynamic visual summaries.

### XLOOKUP & FORMULAS

For efficient data retrieval and calculating derived metrics like Month and Day.

### CONDITIONAL FORMATTING

To highlight critical issues like high wait times or low customer ratings instantly.

# KEY BUSINESS METRICS

## Project KPIs

₹51.4M

### TOTAL REVENUE

Total booking value across all categories.

₹46.9M

### SUCCESS REVENUE

Actual revenue realized from completed rides.

148.8K

### TOTAL BOOKINGS

Massive scale of 145k+ records analyzed.

4.4 / 5

### AVG. RATING

High customer satisfaction despite operational issues.

# REVENUE & DEMAND BY VEHICLE

Market Analysis

## AUTO DOMINANCE

Highest demand and revenue contributor at **₹12.78M**.

## STRATEGIC INSIGHT

Expanding the **Auto fleet** is the biggest opportunity for growth, as it consistently outperforms premium segments in volume.

Auto and Mini segments represent over **45%** of total booking value.

# CANCELLATION ANALYSIS

Revenue Leakage

₹5.0M

ESTIMATED REVENUE LOSS

 DRIVER BEHAVIOR

"Driver asked to cancel" and "Driver not moving towards pickup" are the top operational issues.

 LOCATION ISSUES

Wrong address or pickup location mismatches contribute to customer-side cancellations.

**STRATEGIC ACTION**

Implement driver penalties for forced cancellations and optimize dispatch logic to reduce wait times.

# OPERATIONAL EFFICIENCY

## Wait Time Analysis

### AVG. CTAT

**Customer Turnaround Time:** High wait times lead to customer frustration and lower retention.

### AVG. VTAT

**Vehicle Turnaround Time:** Efficient driver response once a booking is accepted.

💡 **Target:** Optimize dispatch logic to reduce CTAT below 20 minutes for better driver utilization.

# INTERACTIVE DASHBOARD PREVIEW

## Visual Summary

## DYNAMIC SLICERS

Interactive filters for Date and Month allow users to drill down into specific time periods instantly.

## MULTI-CHART VIEW

Combines 6+ charts to provide a holistic view of operational and financial performance.

### TOP PICKUP HOTSPOTS

Identified **AIIMS, Badarpur, and Dwarka** as the highest demand locations.

A one-stop view of Business Trends, Booking Status, and Revenue metrics.

# FINAL RECOMMENDATIONS

## Strategic Roadmap

### REDUCE CANCELLATIONS

Implement penalties or incentives to stop "Driver asked to cancel" issues and prevent heavy revenue loss.

### FLEET EXPANSION

Increase the number of Autos to meet the high demand and capture more market share in the NCR region.

### OPTIMIZE CTAT

Improve routing and dispatch logic to reduce customer wait times and enhance the overall user experience.

### MONITOR HOTSPOTS

Position more drivers near top pickup locations like AIIMS and Dwarka to align supply with customer demand.

# CONCLUSION & LEARNINGS

## Final Thoughts

**Data is the engine of modern business growth.**

This project demonstrates how turning 145,000+ rows into a single interactive dashboard can make decision-making 10x faster and more accurate.

## ✔ DATA-DRIVEN SUPPLY

Real-time monitoring helps in aligning vehicle supply with customer demand hotspots like AIIMS and Dwarka.

## 🚀 THE NEXT STEPS

Automating the data pipeline for daily real-time updates and integrating predictive modeling for demand forecasting.
